Section B. Residential Building Permits	9
Section C. Housing Needs Assessment Surveys	19
Section D. Bureau of Economic Analysis Employment and Income	69
Section E. Census Data	119
Section F. Semiannual Rental Vacancy Survey	121
Section G. DOT Driver’s License Exchanges	129
Section H. WCDA’s Tax Credit and HOME Project Units	133

SECTION A. WYOMING LABOR FORCE

Labor force data are from the Bureau of Labor Statistics (BLS) and Wyoming Department of Employment (Wyoming Labor Market Information). These data are estimated from the Current Population Survey (CPS) and have been adjusted for commuting and dual job holding. The data represent persons by place of residence and may include workers involved in Labor Management Disputes.

According to the BLS, the sum of individual items may not always equal the totals due to independent rounding off of totals and components to the nearest thousand.

SECTION B. RESIDENTIAL BUILDING PERMITS

The Census Bureau collects new, privately owned residential building permits from individual permit offices on a voluntary basis only. Geographic areas are defined by the Census Bureau. The frequency of reporting is either monthly or annual. Very few areas report monthly in Wyoming, and those that do have significant delays in reporting. Consequently, only annual data are reported herein.

According to the Census Bureau, “(a) housing unit is a house, an apartment, a group of rooms or a single room intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants live separately from any other individuals in the building and which have a direct access from the outside of the building or through a common hall. In accordance with this definition, each apartment unit in an apartment building is counted as one housing unit.” The first five tables in this section report the number of new, privately owned residential building units permitted. The next four tables report the valuation of new units permitted as reported voluntarily to the Census Bureau and expressed as real 2006 dollars, or the value of the construction with the effects of inflation eliminated from the data. It should be noted, as well, that when a permitting process does not cover an area, valuation and permit data may be underrepresented.

SECTION C. HOUSING NEEDS ASSESSMENT SURVEYS

These data are summarized from surveys administered at local Department of Transportation driver's license offices throughout Wyoming. These survey instruments are voluntary and directed to those individuals who come into local Department of Transportation offices to exchange their out-of-state license for a Wyoming license. Hence, the survey represents the situations, feelings, and opinions of new residents to Wyoming.

Data in this section are presented as a percent distribution of all responses. These percent distributions may differ from those presented in Volume I of the Profile because those narratives represent a subset of all responses rather than the entire sample.

SECTION D. BUREAU OF ECONOMIC ANALYSIS DATA

The U.S. Bureau of Economic Analysis (BEA) employment and income data are drawn, in part, from income tax filings; hence, 2008 was the most currently available county-level data when this report was prepared.

The Office of Management and Budget (OMB) introduced the North American Industry Classification System (NAICS) to replace the Standard Industrial Classification (SIC) system.³ The NAICS system makes it possible to compare industry statistics among international, state and local economies. NAICS groups economic activities into 21 sectors, up from the 10 divisions in the SIC system. The use of NAICS makes substantial time series breaks in most industries. Time series breaks will affect projections and comparisons of statistics over time due to differences in the two systems. One of the major differences is the structure of the NAICS taxonomy, which is based on a production-oriented, or supply-based, conceptual framework instead of an output-based framework, which characterized SIC.

Beginning with the 2001 data, the BEA used the NAICS in place of the SIC system. The employment and earnings data in this section present the latest NAICS data available for 2004 through 2008.

The following concepts are used in this section:

Employment represents jobs, not labor force (which counts individuals). These jobs include proprietorships, agricultural work, domestic employment, and casual labor jobs.

Income data includes earnings from work as well as unearned income sources, such as dividends, interest, and rent (DIR), as well as government transfer payments, such as welfare. Personal income represents place of residence data. All income data are presented in terms of real 2005 dollars. This means that the effects of inflation have been taken out of the numbers.

Earnings were derived from place of work data that included all workers, labor, and proprietors. Social security contributions were subtracted along with a residence adjustment that corrected for earnings of persons living out-of-state.

Missing data represented by “.” in the tables are not always zeros; they may represent a decision by the BEA to restrict release of the information due to any of the following reasons:

- (D) Not shown to avoid disclosure of confidential information; however, the estimates for this item are included in the total.
- (L) Less than \$50,000; however, the estimates for this item are included in the total.
- (N) Data not available during a year.

²⁸ Earnings are developed from place of work data and represent all workers, labor, and proprietors. Social security contributions are subtracted. Residence adjustment corrects for earnings of persons living out-of-state. Personal income represents place of residence data.

²⁹ (NA) indicates that data are not available. In the case of per capita income, revised numbers related to the release of the 2010 census figures have not yet been made available.

SECTION F. SEMIANNUAL RENTAL VACANCY SURVEY

The Wyoming Semiannual Rental Vacancy Survey has been completed 21 times, every six months, starting in July 2001 to most recently, June 2011. This survey is implemented via telephone and has proven to have high response rates and more complete and consistent answer sequences.

This section tabulates answers for a variety of questions. However, for all the improved techniques, respondents are not always able to completely answer every question sequence. For example, when asked about total units they were usually able to answer, but sometimes respondents were not able to provide the discrete breakdown of the type or size of all their units. Consequently, the sum of the details in the following tables may not always equal the total. The July 2011 survey had 1,353 completions, covering 28,819 rental units.
