

GEOLOGICAL SURVEY OF WYOMING

MR43-15

Keahey Mines and Co., Inc. - 20 mi. of Shoshoni - 560 acres, 28 claims

Capitalized under securities law of Wyo. for \$250,000. At present there are less than \$100,000 in shares outstanding of which more than \$65,000 is promotional stock.

Keahey, Peterson, Studer, Brown, Nicely, Krupa, Scooney, Soenson, Filmore, etc. now own stock.

Started with Keahey, son, Brown, and then Filmore owning 1/4 interests in the property.

Ore is low-grade, spotty, and erratic in occurrence. It is essentially all milling ore - except pockets on Olive 5 - a milling proposition, if that.

Part of the claims have possibilities of producing milling ore but to determine the exact places would require a detailed mapping of the claims.

Best bet is to put in 2 or 3 pits up hill from pit where raise hits surface to see if ore is present. Also a trench to NW to Hb Diorite. If, in addition, the Bur Mines cross-cut encounters ore there, enough would be proved (if assays are 1% or about) to get in a prospective buyer.

Good Prospect. Insufficient development work and surface mapping to prove ore. Sufficient depth (several hundred feet) to justify large company investigation.

10-11-43

Capitalized under securities law of Wyo. for \$250,000

At present there are less than \$100,000 in claims outstanding
of which more than \$65,000 is promotional stock.

Keahey, Peterson, Stedman, Brown, Neely, Krupa, Leoney,
Lauman, Filmore, etc. now own stock.

Starting with Keahey, on known - then Filmore for the day,
among 14 interests in the property.

One is low-grade, spotty, & erratic in occurrence. It
is essentially all milling ore - a few pockets of Chert & 2
milling prospects of that.

But if the ore here, for the purpose of producing milling
ore, but to better the spot, pieces would require a
lot of work on the claims.

Best bet is to put in 2 or 3 pits up hill from
it where natural flat surface, to see if ore is present. This
itrench it all to H.B. Dierke. If, in addition, the Bear
Horse cross cut encounters ore, then enough would
be proved (if any are 1200 or about). To get someone in
a prospective buyer.

Good prospect. Insufficient dev. work & surface mapping
more or less sufficient to get a small field for a good large
mine.
